BlueSpice 3.1

BlueSpice 3.1 is a minor release. This is a stable release.

Notable Changes

- Completely redesigned title section
 - Focus on convenience: See and modify relevant page information at a glance
 - Category handling: Categories are now shown in the title section and can be edited
 - Quality management: State of a page is displayed and can be changed
 - Page neighborhood: Subpages and related pages are shown in a breadcrumb navigation and can be easily be explored
- UX improvements
 - UX audit: Many improvements in iconography, labeling and navigation
 - Page load masks: Indicator for system activity to create a smoother experience
 - Fullscreen mode: Switch the wiki to full screen for more space
 - Accessibility audit: Many improvements regarding accessibility for screenreaders
- Search
 - Better scoring: Several tunings to provide a more natural search result order. E.g. base names have preference over subpages
 - Flexible autocomplete: It is now possible to use multiple infixes. E.g. search for "blue 3" results in BlueSpice 3.0
 - Similar pages: Pages with similar terms can be found in the page information flyout
- VisualEditor
 - Table formatting: Change the width and height of cells and apply various stylings
 - Text colors: Add colors to words and table backgrounds
 - File handling: It is now easier to link to files and upload files directly to namespaces
 - Convenience: Less clicks in file and save dialogs
- Performance boost
 - Complete performance audit: This leads to a significantly faster page load
 - Support for nginx: This results in a major performance boost
- Timeline
 - Integrated discussion page: Both classical wiki text and threaded discussions are stored on one page.
 - One step creation: Attachment and discussion sections can now be created in one click

BlueSpice Foundation

- Foundation: Add "BSExtractFiles"
- Foundation: Add APIAfterExecute hook handler class
- Foundation: Add Bosnian alias and cleanup *.alias.php files
- Foundation: Add GroupList config multi select
