BlueSpice 2.22.1 is a patch and maintenance release.

## Changes since 2.22.0

### extensions/BlueSpiceFoundation

- Fixes & changes to support MW updater
- Use database specific escape methods to escape string for sql
- Moved some messages from BSFoundation to respective extensions
- Function for uploading base to tmp added
- Had to separate the query in getCategoryStoreData because it was too expensive - ended in dead lock
- Removed legacy code
- Fix to stay compatible with MW 1.23
- Fixed several bugs in InsertFile in combination with VisualEditor and getCategoryStoreData
- Now using ExtJS StateManager
- Fixed a bug in getCategoryStoreData which occurred, when a category title could not be created
- Fixed bug that categories which did not exist anymore were displayed
- Improved code of CommonAJAXInterface
- Fixed inheritance issues with CRUDGridPanel
- Improved list formatting
- Added \$wgExternalLinkTarget = '\_blank'; as default
- Changed wrong variable name in getUsersForVar
- Added subpage check before rewrite links to user subpages
- Removed MW::BlueSpiceScriptPath
- Fixed methods args in HTMLFormFieldOverrides
- Fixed display of extension version & status on Special:Version

## extensions/BlueSpiceExtension

- Fixes & changes to support MW updater
- Remove some easily removed \$wgTitles from BlueSpiceExtensions (thanks to Chad Horohoe)
- Authors: Don't link to deleted users' user pages.
- Dashboards: Fixed bug that portlets which were closed are still present after reload
- ExtendedSearch: Index specialpages by default
- ExtendedSearch: Added possibility to search for dots and improved basic searching
- ExtendedSearch: Tags are no longer parsed to prevent errors while indexing
- ExtendedSearch: Added use of sanitizer for logging of search
- ExtendedSearch: Added new text field type for autocomplete. WordDelimiterFilterFactory does its job but is not made for it so changed to EdgeNGramFilterFactory
- ExtendedSearch: getLang is deprecated so user getLanguage instead
- ExtendedSearch: If Solr does not respond extendedsearch still crashed when some actions are performed
- ExtendedSearch: All behaviour switches are removed from search index
- ExtendedSearch: Surrounded result head with a table to ensure if the title is very long that it is not displayed below icon
- ExtendedSearch: If a redirect to an article exists ExtendedSearch more like this returned the redirect as first result
- ExtendedSearch: Fixed spellchecker returned strange results because of wrong tokenizer
- ExtendedSearch: No more output in index\_prog.txt file while indexing on cmd
- Flexiskin: Fix for Flexiskin to make the logo work again
- Flexiskin: Add skin validation
- InsertCategory: Force InsertCategory to request a reload from server not from cache
- InsertCategory: Show InsertCategory link in more menu on all namespaces except special
- InsertFile: Page link is set now when image selected text is read in
- InsertFile: Fix for image insertion, now inserts at cursor position (ie)
- InsertFile: Fix for bug that buttons are sometimes not loaded
- InsertFile: Fixes for picture selection and insert in article
- InsertFile: Fixed several bugs in InsertFile in combination with VisualEditor and getCategoryStoreData
- InsertFile: Fixed API upload for IE9
- InsertFile: File warnings work with mw 1.22 now
- InsertLink: Fixed double icon
- InsertLink: Re-activated file link tab in InsertLink dialog for IE9
- InsertLink: Fixed URI format in file links
- InterWikiLinks: Fixed trailing comma. Now InsertLink works in IE8
- NamespaceManager: Places MetaFields-Hook outside of ::getData
- NamespaceManager: Reimplemented hooks for new fields
- NamespaceManager: Fixed issues with system-namespaces and extension-namespaces
- NamespaceManager: Added ids to namespace manager dialogs
- Notifications: Improved messages in flyout and email
- PageTemplates: Added two column layout for page templates
- PageTempaltes: Fixed bad preload param

- PageTemplates: Fixed bug that only last templates of each section was shown instead of all
- PageTemplates: Fixed bug that templates for all namespaces were not shown
- PermissionManager: Introduced new setting that allows to disable reality check
- PermissionManager: Fixed path to database schema file
- Readers: SpecialPage Readers is now unlisted
- Readers: Implemented own replace for Readers to ensure the database does not grow unlimited
- Readers: Removed revision based Readers for every article now just article based
- Readers: Fixed fatal error on user subpages when Readers are opened up
- Review: Fixed 'undefined index' notice in vector skin
- Review: Fixed wrong enddate on specialpage
- Review: Minor boolean operator fix
- Review: Changed accept/reject buddon order
- RSSFeeder: Bug in the watchlist feed got fixed. Even with an empty watchlist, the feed will now produce a valid output. The subscription process in Outlook and similar software should work now.
- RSSStandards: Don't lie about what function makes a query (thanks to Chad Horohoe)
- SaferEdit: Changed initialization time of SaferEdit so IE8/9 will not crash anymore
- ShoutBox: Fixed BSShoutBoxGetShoutsBeforeQuery hook handling
- ShoutBox: Added "characters left" counter to shoutbox
- Smartlist: Fixed toplist month portlet results were not sorted
- StateBar: Removed unused css property
- StateBar: Removed padding so statebar and nav head have the same height
- StateBar: Rearranged hook in Statebar JS
- StateBar: If article redirects to none existing article you don't get redirected so show statebar
- Statsitics: Fixed statistics portlets resources for UserDashboard
- Statsitics: Removed loadMask from chart export
- UEModulePDF: Enabled PDFPageProvider::getPage to consume 'title'-key-arrays
- UEModulePDF: Removed some old code from UEModulePDF
- UserManager: Own user can not be deleted any more
- VisualEditor: Fix for wrong spacings in tables
- VisualEditor: Can move cursor out of tables now
- VisualEditor: Language fix
- VisualEditor: Fix for wrong img sizes after editor switch
- VisualEditor: Fixed bug with image resizing
- VisualEditor: Fixed JS error after TinyMCE was removed
- VisualEditor: Explicitly include RL modules. This is one step to make VE run under IE8
- VisualEditor: Bind startup of VE on documentready. Otherwise, the function is called twice
- VisualEditor: Image sizes are now processed correctly and survive roundtrip
- VisualEditor: Added clientside dependency management to VisualEditor
- VisualEditor: Moved calls to mw-object into jQuery ready handler
- VisualEditor: Fixed minor bug with quicksave on not existing pages
- VisualEditor: Colored links now pass roundtrip

- VisualEditor: Improved table cells. This fixes a bug where mixed th and td tags would lead to data loss
- VisualEditor: Reenabled noneditable elements
- VisualEditor: Keep empty divs with ids or classes
- VisualEditor: Insert image at cursor position
- VisualEditor: Images now keep no link / link status on edit

## skins/BlueSpiceSkin

- Moved skyScraper method call
- Fix to stay compatible with MW 1.23
- Fixed MW warnings because of wrong aliases
- Added missing mw hook for language urls
- Increased size of images for login buttons in mw 1.22+
- Fixed position of widget container
- Removed unused fb-\* values
- Prevent fatal error if user uses "\*\*\* mainpage|Hauptseite|[[Trainings.png]]" in MediaWiki:Sidebar
